(Name and telephone number, including area code, of the person to contact in connection with this report.)

Check the appropriate box to indicate the rule pursuant to which this form is being filed, and provide the period to which the information in this form applies:

Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1 to December 31, 2020.

Section 1 – Conflict Minerals Disclosure

Items 1.01 and 1.02 Conflict Minerals Disclosures and Report, Exhibit

IMAX Corporation (the “Company” or “IMAX”) has filed a Conflict Minerals Report which is provided as Exhibit 1.01 hereto and is also available on the Governance page of the Company’s Investor Relations website at <http://www.imax.com/content/investor-relations>.¹

Section 2 – Exhibits

Item 2.01 Exhibits

The following exhibit is filed as part of this report.

Exhibit 1.01 – [Conflict Minerals Report for the year ended December 31, 2020](#)

Cautionary Note Regarding Forward-Looking Statements

This Specialized Disclosure Report on Form SD, including the Conflict Minerals Report exhibit, contains forward-looking statements that are based upon management’s expectations and beliefs concerning future events. Certain matters contained herein concerning the future, including risk mitigation steps, constitute forward-looking statements and are based upon management’s expectations and beliefs concerning future events impacting the Company’s efforts to improve its due diligence and risk mitigation strategies relating to any conflict minerals used in the Company’s manufacture or contract to manufacture activities. There can be no assurance that these future events will occur as anticipated. Forward-looking statements speak only as of the date they were made, and the Company undertakes no obligation to publicly update them. For a description of certain factors that could cause the Company’s future results to differ materially from those expressed in any forward-looking statement, see Item 1A of the Company’s Annual Report on Form 10-K for the year ended December 31, 2020, as amended by its Quarterly Report on Form 10-Q for the period ended March 31, 2021, entitled “Risk Factors.”

¹ The reference to the Company’s Investor Relations website is provided for convenience only, and its contents are not incorporated by reference into this Form SD or the Conflict Minerals Report nor deemed filed with the U.S. Securities and Exchange Commission.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the duly authorized undersigned.

Senior Vice President, Legal Affairs and Corporate Secretary

IMAX CORPORATION**Conflict Minerals Report****For the Year Ended December 31, 2020**

This report for the year ended December 31, 2020 is presented to comply with Rule 13p-1 under the Securities Exchange Act of 1934 (the “Rule”). The Rule was adopted by the Securities and Exchange Commission (the “SEC”) to implement reporting and disclosure requirements related to conflict minerals as directed by the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (the “Dodd-Frank Act”). The Rule imposes certain reporting obligations on SEC registrants whose manufactured products contain conflict minerals which are necessary to the functionality or production of such products. The term “conflict mineral” is defined in Form SD under the SEC’s conflict mineral rules as: (A) columbite-tantalite, also known as coltan (the metal ore from which tantalum is extracted); cassiterite (the metal ore from which tin is extracted); gold; wolframite (the metal ore from which tungsten is extracted); or their derivatives which are limited to tantalum, tin, and tungsten, unless the Secretary of State determines that additional derivatives are financing conflict in the Democratic Republic of the Congo (the “DRC”) or an adjoining country that shares an internationally recognized border with the DRC (collectively, the Covered Countries”) or (B) any other mineral or its derivatives determined by the Secretary of State to be financing conflict in the Covered Countries. The adjoining countries include: The Republic of the Congo, the Central African Republic, South Sudan, Rwanda, Uganda, Zambia, Burundi, Tanzania and Angola.

Tin, Tungsten, Tantalum and Gold will herein be referred to as the “3TGs”.

Pursuant to the Rule, IMAX Corporation (herein referred to as “IMAX” or the “Company”) has undertaken a reasonable country of origin inquiry (“RCOI”) for products manufactured or contracted to be manufactured by IMAX during calendar year 2020. In response to representations from certain of its suppliers obtained in the course of the RCOI, IMAX has conducted due diligence on the source and chain of custody of the necessary 3TGs in its products that it had reason to believe could have originated from the Covered Countries. For that reason, IMAX is required under the Rule to undertake due diligence and to submit to the SEC a Conflict Minerals Report as an Exhibit to Form SD.

This report has been prepared by management of IMAX. The information includes the activities of all majority-owned subsidiaries and variable interest entities that are required to be consolidated. It does not include the activities of variable interest entities that are not required to be consolidated.

References herein to the Company’s Investor Relations website are provided for convenience only, and its contents are not incorporated by reference into this Conflict Minerals Report nor deemed filed with the SEC.

1. Company Overview

IMAX is one of the world’s leading entertainment technology companies, specializing in technological innovations powering the presentation of some of today’s most immersive entertainment experiences. The Company leverages its innovative technology and engineering in all aspects of its business, which principally consists of (1) the digital remastering of films and other presentations into the IMAX format by enhancing their image resolution and sound quality for exhibition in the IMAX network; and (2) the sale or lease of premium IMAX theater systems (“IMAX theater systems”) to exhibitor customers. The IMAX theater systems contain many electronic components, which in turn contain 3TGs that are necessary to their functionality or production.

2. Supply Chain

IMAX develops and designs all of the key elements of the proprietary technology involved in IMAX theater systems. Fabrication of a majority of parts and sub-assemblies, however, is subcontracted to a group of third-party suppliers. IMAX is therefore a purchaser of parts, components and manufactured products that are many steps downstream in the minerals supply chain. As a result, IMAX’s due diligence measures can provide only reasonable and not absolute assurance regarding the source and chain of custody of the necessary 3TGs. IMAX’s due diligence processes are based on the necessity of seeking data from its direct suppliers and those suppliers seeking similar information within their supply chains to identify the original sources of the necessary 3TGs.

3. Product Description

IMAX theater systems may contain conflict minerals within the following components:

- Tantalum, primarily used in capacitors;
- Tin, used in soldered components;
- Tungsten, used in lamp electrodes (solely for non-laser based IMAX theater systems); and
- Gold, used in circuit boards, electrodes, connectors and electronic components.

4. Reasonable Country of Origin Inquiry

IMAX has engaged a third-party service provider, Assent Compliance (“Assent”), to assist with its conflict minerals program. For 2020, IMAX began its RCOI by compiling a list of suppliers, which was extracted from the Company’s vendor list. The list was then filtered to ensure that all suppliers surveyed by the Company actually provided items that were used in final products in 2020. Specifically, the list was filtered to remove:

- Service providers/suppliers;
- Indirect materials suppliers; and
- Inactive suppliers (minimum 1 year since last purchase).

The filtered list was composed of 555 suppliers, which was provided to Assent and uploaded to Assent’s Compliance Manager software system (“Assent Compliance Manager”). Out of these suppliers, 62.88% were complete, 0.72% incomplete, 1.98% invalid submission and 34.41% not submitted.

The Assent Compliance Manager is a SaaS platform provided by Assent that enables its users to complete and track supplier communications as well as allow in-scope suppliers to upload completed Conflict Mineral Report Templates (“CMRTs”) directly to the platform for validation, assessment and management. The Assent Compliance Manager also provides functionality that meets the OECD Guidance (as defined below) process expectations by evaluating the quality of each supplier response and assigning a health score based on the supplier’s declaration of process engagement.

Assent conducted additional analysis of the supply chain which, combined with supplier feedback to identify suppliers who are potentially out of scope. Based on Assent’s analysis, IMAX reviews and confirms which suppliers can be removed. These suppliers can be removed based on the following factors, which were provided either directly by the suppliers or through Assent’s secondary analysis:

- Whether a supplied product was merely packaging (labels do not count as packaging);
- Whether the parts a supplier used did not end up in the final product (e.g., such as equipment used to make the product, including industrial equipment, computers, etc.);
- Whether a supplier used test labs to determine, for example, the resistance or durability of a product;
- Whether a supplier was solely a service provider; and
- Whether a supplier supplied anything to IMAX in the last year.

After limiting the scope of inquiry, Assent conducted the supplier survey portion of the RCOI. The supplier survey utilized a template developed by the Responsible Minerals Initiative (“RMI”) called the CMRT. The CMRT was developed to facilitate general disclosures and information regarding smelters or refiners that provide materials to the supplier. It includes questions regarding the supplier’s conflict minerals policy, the engagement process with its direct suppliers and identification of the smelters or refiners used by the supplier. Suppliers were contacted a minimum of three times by the Assent Compliance Manager. Non-responsive suppliers were also contacted by Assent on a one-on-one basis, with two follow-ups. Communications from Assent also included training and education on completion of the CMRT, as well as access to a resource center for suppliers designed to answer questions. All communications with suppliers were monitored and tracked in Assent’s system for future reporting and transparency.

For calendar year 2020, IMAX’s program continued to include automated data validation on all submitted CMRTs. The goal of automated data validation is to increase the accuracy of submissions and to identify any contradictory answers provided in a CMRT. All submitted forms are accepted so that data is retained and classified as valid or invalid. Suppliers who submit invalid forms are contacted and are encouraged to resubmit a valid form. Suppliers are also provided with guidance on how to correct these validation errors in the form of feedback to their CMRT submission, training courses and direct engagement help.

After completing the RCOI, IMAX then implemented due diligence measures on the source and chain of custody of such conflict minerals, as further described below.

5. Due Diligence

As a result of the RCOI, IMAX has reason to believe that some of the 3TG minerals included in IMAX theater systems may have originated in the Covered Countries. Therefore, IMAX conducted supply chain due diligence on the source and chain of custody of the minerals, in a manner consistent with the framework promulgated by the Organisation for Economic Co-operation and Development (“OECD”) and its *Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High Risk Areas*, including the related supplements on gold, tin, tantalum and tungsten (“OECD Guidance”), an internationally recognized due diligence framework. The OECD Guidance identifies five steps for due diligence that should be implemented and provides guidance on how to achieve each step. IMAX developed a due diligence process to address each of these five steps, namely:

1. Establishing strong company management systems regarding conflict minerals;
2. Identifying and assessing risks in our supply chain;
3. Designing and implementing a strategy to respond to identified risks in our supply chain;
4. Utilizing independent third-party audits of supply chain diligence; and
5. Publicly reporting on our supply chain due diligence

5.1 Establish Strong Company Management Systems

5.1.1 Conflict Minerals Policy

IMAX first adopted a Conflict Minerals Policy in 2014 committed to addressing the concern that certain minerals that are contained in IMAX theater systems may contribute to the funding of military conflict and human rights violations in the Covered Countries. The policy is reviewed and updated on a periodic basis and was most recently revised in September 2019. Through this policy, IMAX has encouraged its suppliers and sub-suppliers to responsibly source 3TGs. This policy is available publicly on the Governance page of the Company’s Investor Relations website at <http://www.imax.com/content/investor-relations>.

5.1.2 Internal Team and Third-Party Service Provider

To ensure compliance with the Conflict Minerals Policy, IMAX established an internal management system to support the conflict minerals team, which includes representatives from IMAX’s technology, supply chain management and legal teams. The conflict minerals team is responsible for implementing IMAX’s conflict minerals program. Management, including senior members of the technology and procurement groups, are briefed about issues arising under the Company’s conflict minerals compliance program.

The Company also used Assent, a third-party service provider, to assist with evaluating supply chain information regarding 3TGs and identifying potential risks, as well as to assist in the development and implementation of additional due diligence steps for the Company to undertake with suppliers regarding conflict minerals.

5.1.3 Control Systems

Controls adopted include, but are not limited to, IMAX’s Code of Business Conduct and Ethics, which outlines expected behaviors for all IMAX employees, IMAX’s Conflicts Minerals Policy, the IMAX Supplier Compliance Document, and supplier conflict minerals contract clauses as further described below.

A number of parts contained in IMAX’s products are commercial, off-the-shelf (“COTS”) components. Each new purchase order for COTS components requires that the supplier assist the Company in implementing its Conflict Minerals Policy, such as by completing the CMRT. IMAX further compiles a list of all unique COTS items contained in IMAX products and contacts the manufacturers of each COTS items to request completion of the CMRT.

IMAX also contracts with various suppliers for fabricated assemblies. Based on drawings provided by IMAX, suppliers fabricate a portion of these assemblies from various materials, such as metal for enclosures. All metal fabrication drawings generated by IMAX specifically state the materials used are to be conflict-free. These fabricated assemblies are in turn used by IMAX in the assembly of its products. All new purchase agreements for the manufacturing of assemblies incorporated into IMAX products contain clauses that require suppliers to assist IMAX in implementing its Conflict Minerals Policy, such as by completing the CMRT. However, contracts with the Company's direct suppliers are frequently multi-year term contracts. In the case of existing contracts, the Company generally is unable to unilaterally impose new contract terms prior to expiration of the contract. However, IMAX works individually with key selected suppliers to ensure they provide 3TG sourcing information for current contracts. As the Company renews contracts or enters into new ones, it intends to add a clause that requires all applicable suppliers assist IMAX in implementing its Conflict Minerals Policy.

5.1.4 Supplier Engagement

With respect to the OECD Guidance requirement to strengthen engagement with suppliers, IMAX has, through Assent, provided education on conflict minerals regulation as well as communicated IMAX's expectations of the parties' continued business relationship through video, recorded training and documented instructions. IMAX utilizes Assent's learning management system, Assent University, and provides all of its in-scope suppliers with access to conflict minerals training courses available through such program. Feedback from engagement with suppliers has further allowed IMAX to enhance the supplier training, and to ensure that communications with the Company's suppliers are focused and adapted appropriately to each supplier. The Company has also leveraged processes and educational opportunities available through Assent in order to ensure non-English speaking suppliers have access to a free platform to upload their CMRTs, help desk support and other multilingual resources.

5.1.5 Grievance Mechanism

In the event of an actual or possible violation of the Company's policies, including the Company's Conflict Minerals Policy, employees (internal) and suppliers (external) can report violations as part of the Company's whistleblower protocol for reporting suspected violations of the IMAX Code of Business Conduct and Ethics. The Company's Code of Business Conduct and Ethics provides the method by which such reports can be made and is available on the Governance page of the Company's Investor Relations website at <http://www.imax.com/content/investor-relations>.

5.1.6 Maintain Records

Assent has implemented a document retention policy and maintains all relevant documentation in a database that can be audited by internal or external parties for a minimum of five years, as per the OECD Guidance.

5.2 Identify and Assess Risk in the Supply Chain

Because of IMAX's size, the complexity of its products, and the depth, breadth, and constant evolution of its supply chain, it is difficult to identify actors upstream from the Company's direct suppliers. The majority of IMAX's direct suppliers who were asked to submit a CMRT and who provided a CMRT identified their components and products as containing 3TGs. These suppliers are relied upon to provide IMAX with information about the source of 3TGs contained in the components and products supplied to us.

IMAX does not have a direct relationship with smelters and refiners and does not perform direct audits of the pre-supply chain of these entities. Risks are identified based on criteria established for supplier responses in IMAX's conflict minerals compliance system. Specifically, with assistance from Assent, supplier risk is classified as high, medium or low based on various scoring criteria, including: (1) whether there is known or plausible evidence of unethical or conflict sourcing by the smelter or refiner; (2) an analysis of the smelter or refiner country and its proximity to Covered Countries; (3) the smelter or refiner's audit status with the RMI's Responsible Minerals Assurance Process ("RMAP"); (4) known mineral source country of origin; and (5) whether peer assessments were conducted by credible third-party sources. Where a smelter or refiner is claimed to be "conflict-free", the facility is cross-referenced against the lists maintained by the RMI. In cases where IMAX identifies supplier risk, IMAX will contact the supplier, gather pertinent data and perform an assessment of the supplier's conflict minerals status.

If any of IMAX's direct suppliers report a high-risk smelter on its CMRT, Assent will request that the supplier in question provide a product-level and/or user-defined CMRT. This helps to enable IMAX to determine if there is any connection between IMAX theater systems and the high-risk smelters reported. The results of IMAX's smelter and refiner data analysis are described in Section 6 below.

The Company believes that the inquiries and investigations described above represent a reasonable effort to determine the mines or locations of origin of the 3TGs in its products, including (1) seeking information about 3TG smelters and refiners in the supply chain through requesting that suppliers complete the CMRT, (2) verifying those smelters and refiners with the expanding RMI lists, (3) conducting the due diligence review, and (4) obtaining additional documentation and verification, as applicable.

5.3 Design and Implement a Strategy to Respond to Risks

As described in IMAX's Conflict Minerals Policy, IMAX will engage with any suppliers whom it has reason to believe may be supplying the Company with 3TGs from sources that may support conflict in the Covered Countries to establish an alternative source of 3TGs that do not support such conflict, as provided in the OECD Guidance.

Feedback on supplier submissions is given directly to suppliers and educational resources are provided to assist suppliers in corrective action methods or to improve their internal programs. Assent also communicates directly with smelters that have not yet been determined to be conformant with the RMAP in order to request sourcing information and encourage their involvement with the RMI program. At present, the Company has found no instances where it was necessary to terminate a contract or find a replacement supplier.

5.4 Carry out Independent Third-Party Audit of Supply Chain Due Diligence at Identified Points in the Supply Chain

The Company does not typically have a direct relationship with 3TG smelters and refiners and does not perform or direct audits of these entities within its supply chain.

Instead, the Company relies on third-party audits of smelters and refiners conducted as part of the RMAP, which uses independent private sector auditors to audit the source, including the mines of origin, and the chain of custody of the conflict minerals used by smelters and refiners that agree to participate in the program.

Assent also directly contacts smelters and refiners that are not currently enrolled in the RMAP to encourage their participation and gather information regarding each facility's sourcing practices on behalf of its compliance partners.

5.5 Report Annually on Supply Chain Due Diligence

The Company reports annually on supply chain due diligence by filing a Form SD and a Conflict Minerals Report with the SEC. The Company's Form SD and Conflict Minerals Report can be found on the Governance page of the Company's Investor Relations website <http://www.imax.com/content/investor-relations>.

This year IMAX has also considered impacts from the European Union Conflict Minerals Rule when disclosing details with regards to due diligence efforts. IMAX will continue to expand efforts both for transparency through the data collection process and risk evaluation, as well as the disclosure of efforts through the form of public report.

6. Due Diligence Results

The large majority of the responses received provided data at a company or divisional level meaning that the 3TG may or may not actually be present in the components or parts actually supplied to IMAX. In many other cases, the suppliers were unable to specify the smelters or refiners used for components supplied to IMAX. Furthermore, suppliers did not always provide smelter or refiner lists nor were the smelter or refiner lists they did supply consistently completed with smelter or refiner identification numbers. In addition, many of the responses provided at the company or division level indicated an "unknown" status in terms of determining the origin of 3TGs. Therefore, IMAX was unable to validate that any of these smelters or refiners are actually in its supply chain.

As of May 20, 2021, IMAX had received 364 CMRTs from suppliers for an overall response rate of 66%. Of the responses received, 53 suppliers claimed that they source 3TGs from the Covered Countries. There were 11 invalid supplier submissions. Many suppliers were unable to provide all of the smelters or refiners used for materials supplied to IMAX, and some responses indicated an "unknown" status with respect to the origin of their materials.

As of May 20, 2021, IMAX had validated 333 legitimate smelters or refiners and continues to work to validate the additional smelter and refiner entries from the submitted CMRTs. IMAX has included the current list of valid smelters and refiners disclosed to it by suppliers in Annex 1 to this report.

Based on the smelter and refiner lists provided by suppliers via the CMRTs, which were in turn validated against the RMI as described above, the Company is aware of (i) 237 conflict-free smelters or refiners and (ii) 8 smelters or refiners that have begun the process to be validated as conflict-free, and which are active in the RMAP but have not yet been validated as conflict-free. Annex 2 includes an aggregate country list of known smelter or refiner sourcing countries.

7. Steps to Be Taken to Mitigate Risk

Going forward, IMAX intends to take the following steps to further improve its due diligence and to further mitigate any risk that the necessary 3TGs in IMAX products could benefit armed groups in the Covered Countries:

- Periodically reevaluate and enhance clauses in new purchase orders and supplier contracts to assist in implementing the Company's conflict minerals program;
- Pursue strategies to increase the number of suppliers providing information while working with suppliers to move to the latest version of the CMRT;
- Engage any suppliers found to be supplying the Company with 3TG from sources that support conflict in the Covered Countries and encourage them to establish an alternative source of 3TG that does not support such conflict; and
- Continue to emphasize clean and validated smelter or refiner information from the supply chain as the list of conflict-free smelters and refiners grows and more smelters declare their intent to enroll in the program.
- Encourage suppliers to have due diligence procedures in place for their supply chains to improve the content of the responses from such suppliers.
- Following the OECD Guidance process, increase the emphasis on clean and validated smelter and refiner information from the supply chain through feedback and detailed smelter analysis.

All suppliers who do not know the origin of the 3TGs in their products will be further encouraged to examine their supply chain and enact due diligence measures as per the OECD Guidance. The goal for these suppliers is to determine origin of their 3TGs and, if not from recycled or scrap resources, then to ensure a conflict-free origin. Should suppliers of parts that are at a high risk of containing 3TGs remain unresponsive or if suppliers are unable to definitively determine origin and to take necessary subsequent steps to ensure that their products are conflict-free, IMAX will consider replacing such suppliers.

Smelter & Refiner Risk Evaluation

Understanding the risks associated with the smelters and refiners potentially providing material into IMAX's supply chain is an important part of the due diligence process. Through Assent, IMAX conducts a comprehensive and ongoing analysis through Assent's smelter library manager to assess sourcing risk. This information is used to:

- Provide supplier feedback.
- Determine the health of the Company's overall program.
- Conduct outreach to smelters, refiners and their respective associations.
- Provide detailed analysis in this report.

The following risk categories are used for smelter evaluation and risk determination:

Geo-Risk:

- Did the mineral originate from or has been transported through a conflict-affected area as defined by Section 1502 of the Dodd-Frank Act (the DRC and its nine adjoining countries; Angola, Burundi, Central African Republic, Republic of the Congo, Rwanda, South Sudan, Tanzania, Uganda, and Zambia)?

Audit Status:

- Have the refiner's due diligence practices been audited against a standard in conformance with the OECD Guidance?
- Assent relies on the RMI audit standard, including cross-recognition of the London Bullion Market Association ("LBMA") Good Delivery Program and the Responsible Jewelry Council Chain of Custody Certification, which are developed according to global standards, including the OECD Guidance.

Sourcing Risk:

- Has evidence of any other red flag that is supported by credible sources been identified?
